PALLMANN P-104 Application Plywood Subfloors

Dear PALLMANN Distributor:

PALLMANN P-104 is a 1-component polyurethane fast dry primer / surface strengthener and moisture vapor retarder for absorbent and non-absorbent surfaces, to aid in the installation of wood flooring.

PALLMANN P-104 may reduce moisture differences between the sub-floor and wood floor in which the sub-floor does not exceed 20%. In addition P-104 will act as a strengthener of the plywood subfloor which will encapsulate any dust or debris allowing for ease of board movement for quicker installation of the wood floor.

PALLMANN P-104 is also an excellent choice as a primer when installing wood floors in a nail down / glue assist application with PALLMANN adhesives.

When applying P-104 over plywood subfloors it is recommended to use the 10" Nylon Roller (#9194) at an application rate of 350 sqft per gallon.

Item # 67467 PALLMANN P-104

Item # 9194 10" Nylon Roller

Best Regards
